MEEVER USA ANNOUNCES EXPANSION PLANS FOR DISTRIBUTION OF STEEL PILING PRODUCTS, SALES AND RENTALS IN SOUTHEAST USA

Meever USA is a unit of Meever and Meever an international distributor, specializing in the manufacturing and distribution of, Steel sheet pile, Pipe pile, H-Pile throughout the world. Meever has stocking locations and offices in Europe, Middle East, Australia and the USA.

Meever USA offers the largest range of products

and support services, including engineering, fabrication, for all types of piling projects, available from any supplier in the industry.

Jeroen Koelewijn manager of the North-east region announces the appointment of Lee Wilczynski to head up the New Southeast regional office. Lee brings 40 years of experience to the piling industry including

several articles published in Pile Buck. Lee's background includes selling and renting pile driving equipment and steel pile. His extensive background will allow Meever USA to train future employees and offices in the highest standards to serve the industry.

The new Southeast regional office will be responsible for sales and rentals of all Meever USA piling products with special emphasis on the rental market. Since there is a large demand for temporary piles, Meever's service oriented business strategy will be a great asset to contractors in the USA. With several stock locations already established in New York and New Jersey, Meever USA plans to open more stocking locations in the Southeast offering piling available for immediate delivery to the jobsite.

Of special interest to contractors is a New Sheet Pile Product Line, Meever USA will be introducing in the USA in 2016. These sheet piles are known as the "Precision Pile" and can be used in a wide variety of sheet pile applications. This Product Line has been developed by Meever together with experienced production

facilities and this product has already proven to be one of the favorite sheet piles in the European piling industry. The VKZ-series are cold formed Z-sections available with section modules from 16 to 60 in³/ft and the IBO-series are cold formed Pan-sections (a double Z configuration without the common interlock) with section modules from 8 to 50 in³/ft and widths up to 52.67". The unique feature of these sheet piles is that they are produced with such precision that the shape of each section is basically identical and the interlocks are the straightest piling interlocks available on market. Meever can also adjust the dimensions of a section to make it a perfect size for a specific project. Meever USA will be promoting a range of predesigned sections but on request our engineering department will custom design a section to meet your project requirements. The first "Precision Piles" have already been sold in the USA and were successfully received by our customers. In the next months Meever USA will actively promote these Precision cold formed sheet piles.
