ABI MOBILRAM-SYSTEM TM22

TM 22

The TM 22 combines knowledge from construction sites and years of experience. The new telescopic leader mast has a torque capacity of up to 200 kNm. Inner and outer leader mast are each designed as closed profiles and guided into each other. High preload force and high torsional stiffness can be achieved with less material. In addition, frictional losses in the leader are reduced.

The vibratory hammer model MRZV 30VV comes with the machine.

ABI MOBILRAM-SYSTEM TM22

MULTIFUNCTIONAL

If the machine is equipped with a vibrator all kinds of pile elements can be driven or extracted.

LOW SET UP TIMES

The set up of a MOBILRAM-System is very fast. Moving the leader mast from the working into the transport position is done in one step without any external aids.

HIGH MOBILITY

The ABI MOBILRAM can be transported on a low-loading truck.
